

## **Basic API for sending regular SMS:**

**base url:** <http://www.micropay.co.il/ExtApi/ScheduleSms.php>

**parameters:**

**uid** - user id assign to you in the system

**un** - user name you use to log in to the system

**charset** - utf-8 (Unicode)

**from** - a real phone number that will appear as the sender

**list** - comma separated phone list you want to send the message to (can be in any format)

**msglong** - the message you want to send, up to 134 characters in Hebrew, or up to 268 characters in English

If the message is more then 70 characters in Unicode or 140 characters in English, each 67 characters in Unicode count as one message, and each 134 characters in English counts as one message.

The messages will be concatenated if possible.

You can send up to 670 Unicode characters in one message, and up to 800 English characters in one message.

**If you use GET method you need to send the parameter: get=1**

**If you use POST method you need to send the parameter: post=2**

Parameters to schedule a date and time (optional):

All the following parameters must be specified as one unit.

**dh** – Hour, 24-hour format. A number between 00-23.

**di** - Minutes. A number between 00-59.

**dy** - Year, four digits.

**dm** – Month, two digit. A number between 01-12.

**dd** – Day, two digit. A number between 01-31.

Default date and time of scheduling is the date and time of submitting the application.

All the parameters must be url encoded.

The system will return:

**OK XXXX**- if the message was accepted and enter the queue.  
the XXX is the message id.

**ERROR description** - if there was an error, with the description of the error.

**Here is an example of url for sending regular sms with GET method:**

<http://www.micropay.co.il/ExtApi/ScheduleSms.php?get=1&uid=11&un=myun&msg=A+test+message&list=050123456&charset=utf-8&from=035555555>
